Professional Profile

Digital Transformation Lead with a Master's in Business Analytics and Data Science. Built and deployed an installable facilities operations platform for three buildings using React, TypeScript, Supabase and Cloudflare; co-developed three evidence-first Python and JavaScript research tools for farmland decisions, IPO research and commodity-price forecasting. Works test-first, verifies every figure against its source, and hands over with runbooks and documentation.

Experience

Digital Transformation Lead

Jul 2026 - Present

Jai Hasti Infra LLP | Jaipur, India

- **Facilities Operations Platform.** Designed and built a staff PWA and separate admin panel using React 19, TypeScript, Supabase (PostgreSQL, row-level security, Edge Functions) and Cloudflare Pages. Covered tasks, recurring schedules, approvals, requests and equipment readings for three buildings. Shipped an offline-first IndexedDB outbox with exactly-once replay and conflict recovery, Web Push reminders with quiet hours, and an immutable audit log. Delivered 38 forward-only migrations, 34 pgTAP security suites, 79 merged pull requests, CI gates for secret scanning, dependency audit and migration replay, and 15 runbooks, including rehearsed backup and restore (65 tables, zero mismatches).
- **AppSheet Operations System.** Designed and deployed 10 connected tables with scheduled tasks, approval flows, reminders, notifications and separate staff and manager views. Wrote an 80-page implementation and handover guide.
- **Land Project.** Co-developed farmland decision reports for fields drawn on a map: soil, water, crop-history and crop-suitability verdicts from nearby government soil tests, 35 years of daily weather, Sentinel satellite history and mapped water sources. Screened 180 Indian crops through five evidence gates. Owned the "grown elsewhere" extension: screened about 2,300 FAO EcoCrop species per field, rebuilt evidence from 1.74 million licence-checked GBIF records, and measured accuracy on a 971,675-cell world test bed (AUC 0.80 on foreign crops; 0.3% false rejections on Indian district data). Labelled every value tested, estimate or not checked; AI explained verdicts without changing them.
- **IPO Dossier.** Co-developed a private Indian mainboard and SME IPO research tool. Built a Python prospectus reader (pdfplumber, OCR fallback) mapping offer documents to PDF pages and extracting offer terms, restated financials and valuation inputs with page citations and nine arithmetic cross-checks. Withheld any failing value rather than guessing; evaluated against hand-read answer files for 31 documents. Rebuilt the decision sheet around an experienced investor's 13 checks, back-testing each on about 1,150 IPOs (2021-2026). Added past-issue history, scheduled refreshes of subscription, anchor and grey-market data, and two-page decision briefs. Passed 3,051 automated tests; deployed on Railway for the team.
- **Rice Paddy Price Prediction.** Co-developed a Python study forecasting one to three calendar months ahead using LightGBM and XGBoost. Audited 174,556 public AGMARKNET records; compared 19 methods on 1,308 held-out cases. Reported that the validation-selected model did not establish dependable improvement over simple baselines. Built contextual features from reviewed information available at the forecast origin, with a separate source trail.

Land Project, IPO Dossier and Rice Paddy Price Prediction were co-developed with a project partner.

Intern

May 2023 - Jul 2023

RC Plasto | Nagpur, India

- **Process analysis.** Reviewed production, logistics and sales; reported three areas for potential improvement.

Additional Projects

Completed separately from the Jai Hasti Infra LLP role. Details: gabreo10.github.io/portfolio

- **Responsive websites:** Created property and plant-retail website concepts: a property enquiry journey, a plant catalogue, and separate retail and wholesale enquiry paths.
- **US Debt Tracker:** Built an interactive Excel dashboard with pivot tables and charts.
- **Income and Life Expectancy:** Cleaned and explored separate MySQL datasets using joins, grouped summaries and trend queries.
- **Football Ticket Intelligence:** Developed a Python ticket-price prediction model from historical match data (Dec 2023 - Apr 2024).

Technical Capabilities

Languages and data: Python (pandas, pdfplumber, pytest), SQL (PostgreSQL, MySQL), R, JavaScript, TypeScript; LightGBM, XGBoost; data cleaning, feature engineering, backtesting

Applications and platforms: React, Vite, progressive web apps, Node.js, Supabase (RLS, Edge Functions, pg_cron), Cloudflare Pages, Railway, Vercel, Streamlit, AppSheet

Quality and delivery: Vitest, Playwright, pgTAP, GitHub Actions CI, Git; AI-assisted engineering with Claude Code and OpenAI Codex (test-first task delegation and verification); runbooks, release checklists, handover documentation

Research and reporting: Document extraction and OCR, source verification, geospatial and climate data (GBIF, CHELSA, SoilGrids, Sentinel-1/2); Excel, Power BI, Tableau

Education

Master's in Business Analytics and Data Science — Jun 2026

EU Business School | Barcelona, Spain

Bachelor of Business Administration — Jul 2021 - Jun 2024

Data Analytics specialization | Christ University | Bengaluru, India

Leadership and Qualifications

Logistics Head: MirAi Data Analytics Club, Christ University (2023 - 2024). Managed event planning, vendor coordination and workshop logistics.

Certifications: MySQL for Data Analytics; Excel for Data Analytics; Introduction to Football Analytics; Analyzing Football Using Video; Leadership and Team Effectiveness

Languages: English, Hindi, Spanish (A2)
